

# Aligning a Center Graphic Print Order

Below are instructions for using a laser alignment system to align a center graphic design on your Screen Printing Press.

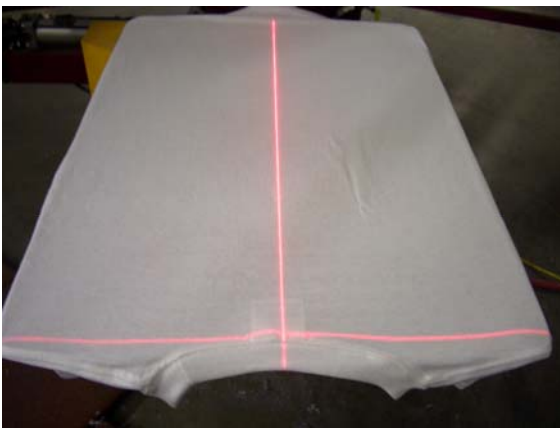

**Step #1:** Run a test print of your graphic on your press. Using a Line Laser, align the laser guideline so that it splits the center of the design. Note that Line Laser may not be in the center of your pallet if the graphic design is not centered on your pallet.

**Step #2:** Align a Line Laser #2 horizontally above the graphic on the test print based on the same distance you want the graphic to appear below the collar of the garment. This Line Laser will be used to make the specific graphic hits in the same location for every shirt.

**Step #3:** Load the Garment so that they center Line Laser goes down the center of the garment. Make sure that the bottom of the collar is aligned with Line Laser #2.

**Step #4:** Print the graphic. You will have a graphic located in the center and in the same exact location of all your shirts.
