Embroidery Laser Alignment System

Embroiderers now have a hooping aid that will allow to them accurately and efficiently hoop a garment straight every time. Laser Targeting Systems introduces a laser alignment system that works in conjunction with all types of embroidery hooping boards. This system projects laser guides on top of the garment to ensure that it is placed straight on the hooping board. In addition, the lasers provide embroiderers guidance in accurately inserting the tubular hoop straight on to the garment.

Laser Targeting Systems provides alignment systems for embroidery, screen printing and heat transfer. All systems are customized for each shop based on the number and type of lasers. Laser Targeting Systems offers three types of commercial grade lasers: spot lasers, line lasers and cross hair lasers. Systems start as low as \$250. For more information, visit the Web site at www.lasertargetingsystems.com or call (800) 426-9416; or e-mail sales@lasertargetingsystems.com.
