

Embroidery Hooping Laser Alignment System

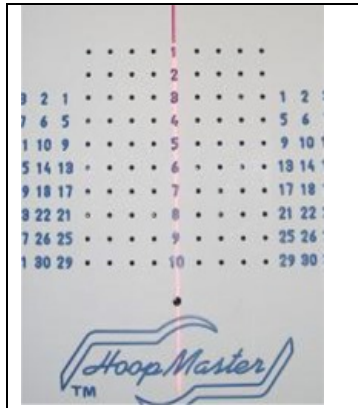

Adding Another Design to an Embroidered Garment on Your Hooping Board

Instructions for adding another design to an Embroidered Garment using your Laser Alignment System from Laser Targeting Systems.

Step #1: Using only your Hooping Board, align a Line Laser (#1 Line Laser) vertically down the center of the Hooping Board. This center Line Laser will assist in putting your garment straight on to the board.

Step #2: Place the Garment straight on to the Hooping Board using the center Line Laser.

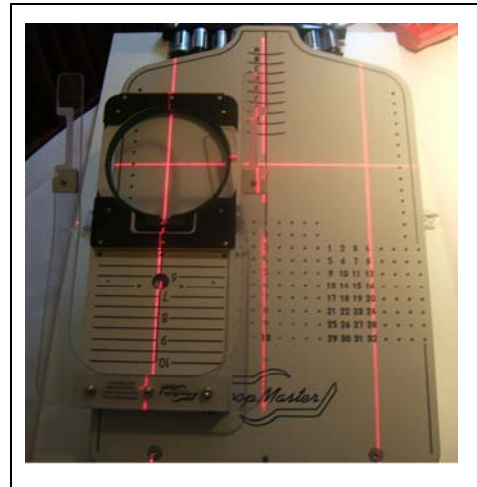

Button-Down Shirt

Step #3: Align Line Laser #2 and Line Laser #3 so that they create a large cross in the center of the existing design. Remove the Garment and make sure that all laser guidelines are straight based on the numbering system or holes on the board.

Step #4: Align Line Laser #4 on the other side of the Hooping Board using the numbering system or count the number of holes on the board. If using the HoopMaster™ System, place Fixture Arm in the center of the cross created with Line Laser #4

Step #4: Place the Garment back on to the Hooping Board aligning the garment with the center Line Laser and the cross created to center the existing design.

Step #5: Use the large cross created with Line Laser #4 to place the hoop straight on to the garment.
