

Embroidery Hooping Laser Alignment System

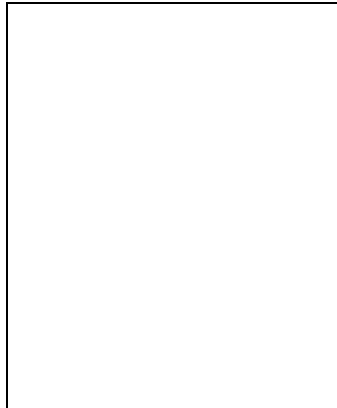

Hooping with the Hoop Mate Hooping Systems™

Instructions for incorporating your Laser Alignment System from Laser Targeting Systems with the Hoop Mate™ Hooping Systems.

Step #1: Using only your Hooping Board, align a Line Laser (#1 Line Laser) vertically down the center of the Hooping Board. This center Line Laser will assist in putting your garment straight on to the board.

Step #2: Place the Garment straight on to the Hooping Board using the center Line Laser.

Polo Shirt

Button-Down Shirt

Step #3: Align Line Laser #2 with the bottom of the collar or another distinct location of the Garment to determine that the Garment is pulled down on to the Hooping Board into the preferred location.

Polo Shirt

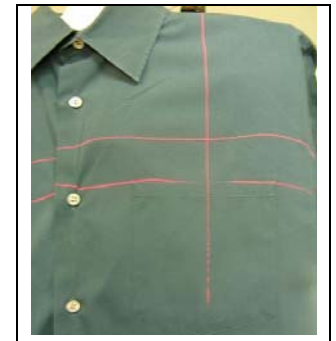

Helpful Tip - Hooping with a Pocket:

Align Line Laser #2 horizontally with the top of the pocket. You may want to align the Garment based on the pocket in case the pocket is not straight on the Garment

Dress Shirt

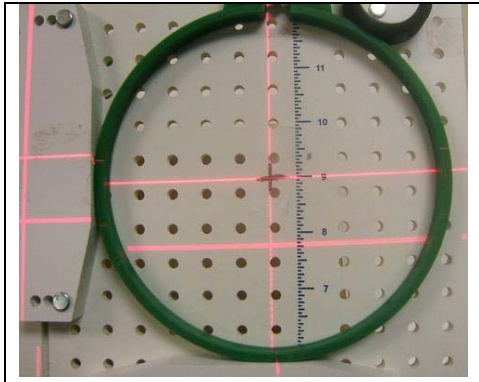

Step #4: Align Line Laser #3 and Line Laser #4 to create a large crosshair that will mark the location on the Garment where you want the center of your design to be located.

Step #5: Place the Hoop Mate™ Universal Brackets into the proper location by centering the hoop ring using the large crosshair created in Step #4.

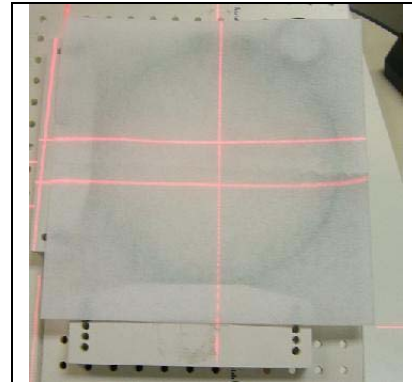

Helpful Tip: Maintaining Laser Alignment

Use a small piece of tape or paper to trace the guidelines of the lasers on the tape to ensure that your lasers guidelines stay in alignment.

Step #6: Place your Garment on to the Hooping Board using the laser guidelines you set.

Step #6: Tape down your piece of backing to the Universal Brackets to keep it firmly in place while you put the garment on to the Hooping Board.

Step #7: Using the center marks or lines on your hoops, use the laser guidelines to properly insert the tubular hoop straight on to the Garment.
