

Heat Transfer Laser Alignment System

Aligning Multiple Transfers for an Athletic Jersey

Instructions for incorporating your Laser Alignment System from Laser Targeting Systems with your heat transfer press machine to produce an athletic jersey shirt.

Step #1: Align Horizontal Line Laser

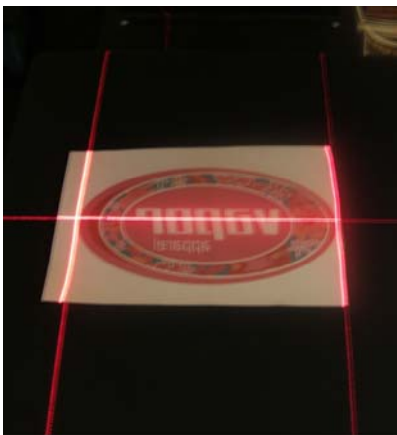

Align a horizontal Line Laser on the heat press pad the exact distance from the center of the transfer to the top of the collar. This will make sure the transfer is placed in the same location for all shirts.

Step #2: Align Two Vertical Line Lasers

Align two Line Lasers perpendicular to the horizontal Line Laser in Step #1. The distance between these two line lasers should be based on the size of the transfer

Helpful Hint: Place Transfer on the Press

Place the transfer on the heat press pad so that you can see the graphic. Align three line lasers so that one Line Laser cuts the graphic in half horizontal and two Line Lasers to box the graphic in.

Step 3: Align the Transfer and Press

Using the laser guidelines, place the garment on the heat press and align transfer in the correct location. You are now ready to close the heat press.
